

Voltage regulator

LED driver

LED output

Servo/Pre-processor in/out

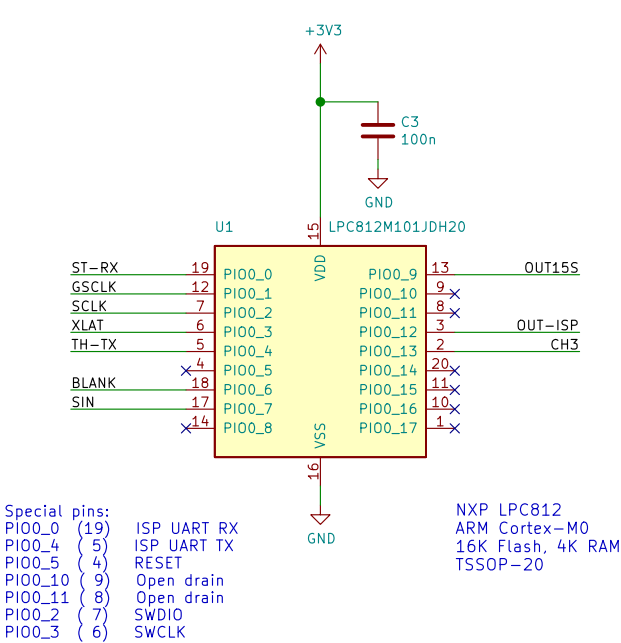

Output connector

VIN1 is physically close to LED+.  
This allows two modes of operation:  
1) when VIN1 is connected to LED+  
via a solder bridge, then the LEDs are  
powered from the receiver.  
2) A separate power supply can be  
connected to LED+ (and the nearby GND),  
e.g. for higher voltages

Microcontroller

Switched output driver
